

AUSTIN ENERGY ANNUAL PERFORMANCE REPORT

Year Ended September 2012

Deliver clean, affordable, reliable energy and excellent customer service.

Updates to DRAFT Published June 2013

This annual report provides operational data that reports on and demonstrates achievements and support for all elements of Austin Energy's mission statement and its strategic goals and objectives. Our goal is to keep our City Council, Electric Utility Commission, the leadership of our community, our customers and our employees informed on our operations through comprehensive reporting.

TABLE OF CONTENTS

Austin Energy Highlights FY 2012	4

Data reflects the City of Austin's 2012 fiscal year ending Sept. 30, 2012, unless otherwise stated.

Austin Energy Highlights FY 2012

Austin Energy strives to deliver clean, affordable, reliable energy and excellent customer service. The utility is nationally recognized for its leadership in energy efficiency; commitment to clean energy resources; and collaboration with energy consortia such as the Pecan Street Inc. to help reinvent the energy delivery system as we know it.

The American Public Power Association (APPA) ranks Austin Energy as the eighth largest of the 2,000 public utilities in the United States. It is one of three utilities, and the first public power utility in Texas, to earn the Reliable Public Power Provider (RP3) Diamond Level recognition. This is the highest recognition level awarded by APPA to public utilities for excellence in reliability, safety, and work force development.

The Austin Energy electric system is rated among the best in the nation for reliability. In FY 2011, the Austin Energy system experienced 0.77 outages per customer with an average duration of 60.74 minutes. Austin Energy completed tree trimming to reduce the risk of tree-related outages along 375 miles of power lines. Austin Energy was also designated a Tree Line USA utility for the 11th year in a row by the Arbor Day Foundation for following best practices in line clearance.

Clean energy resources are a major goal of Austin Energy. The utility has set an aggressive goal that 35 percent of energy produced will come from renewable resources by 2020. Austin Energy's total contracted wind generation capacity increased by 45 percent to more than 630 megawatts (MW) in 2012. A 30 MW solar farm near Webberville, one of the largest utility-scale solar projects in the U.S., came online in December 2011, and a 100 MW biomass project in Nacogdoches came online in June 2012. During FY 2012, almost 15 percent of the power delivered by Austin Energy came from renewable resources.

The Solar Electric Power Association named Austin Energy the 2012 Public Power Utility of the Year for innovation and leadership in solar power. AE was recognized for development of a "value of solar" pricing approach and for a successful solar program that includes facilitation of the 30 MW Webberville project and 7 MW of installed solar on homes, businesses, city facilities and schools. Announcement of the award coincided with AE's completion of a 105-kilowatt solar system on the roof of the George Washington Carver Museum and Library, the 45th public facility in Austin to receive a solar system through the Austin Energy solar program.

Two critical and far-reaching projects that directly affect every Austin Energy customer were prominent in FY 2012. October 2011 began with the go-live implementation of a new Customer Care and Billing System (CC&B). The CC&B is a once-in-a-decade major project that has involved long hours from many employees in the Customer Care, Information Technology and Finance groups. In Spring 2012, the Austin City Council after months of work approved a new five-tier residential rate structure and modified commercial rates that represent the first update of Austin Energy rates in 18 years. The new rates were implemented in October 2012.

Austin Energy Green Building celebrated a major milestone in April 2012, rating its 10,000th single-family home since the program began in 1991. One-third of building permits for new single-family homes issued in Austin are for green building-rated homes. The 10,000th home is a 5-star-rated home that is so energy efficient the owners used a total of 1,300 kilowatt-hours (kWh) of electricity in one year (less than the average home in Austin uses during a summer month). This includes just 400 kWh total during summer 2011, the hottest ever recorded in Austin.

Austin Energy also was recognized for the eighth year in a row for energy efficiency program excellence. The 2012 Energy Star Sustained Excellence Award was presented to Austin Energy by the U.S. Environmental Protection Agency and the U.S. Department of Energy. The award recognizes leadership and long-term commitment to protecting the environment through energy efficiency.

In FY 2012, Austin Energy successfully met stringent federal funding guidelines to complete the weatherization of 1,886 homes — 77 percent more than the original goal — for customers living in poverty or with low incomes. Despite complex process requirements and a strict schedule that resulted in other award recipients losing awarded funds, Austin Energy's performance was so consistent that the utility received additional funding that ultimately totaled \$9.2 million — 60 percent more than the original award. Under this program, each dwelling received, on average, about \$5,000 worth of improvements including new energy efficient appliances, and air conditioning and heating equipment.

Austin became the first U.S. city to require apartment properties with higher than average unit energy use to disclose that information to prospective renters, and the first to require all complexes to give every prospective tenant an estimated monthly electric bill. The requirements stem from the City of Austin Energy Conservation and Disclosure (ECAD) ordinance. AE has mailed notification letters to 51 properties with energy use per square foot that is 50 percent or higher than the average for similar properties. The 51 properties are required by ECAD to tell prospective renters in writing they may experience higher electric bills than for similar apartment properties elsewhere.

Electric Service Delivery was re-certified and Customer Care certified for ISO-9000 international quality management. Both business units are the first in the utility industry to be ISO certified, which requires extensive process and work documentation and ongoing quality checks. Power Supply and Market Operations is also in the process of developing a Quality Management System.

Clean

*Austin Energy's mission is to deliver **CLEAN**, affordable, reliable energy and excellent customer service.*

Austin Energy has an aggressive goal to reduce carbon dioxide (CO₂) emissions by 2020 to a level that is 20 percent below 2005 levels. The Austin City Council approved this goal in April 2010 as part of Austin Energy's Generation Plan.

Austin Energy calculates emissions data using carbon dioxide (CO₂) equivalents. This is a measure used to compare the emissions of different greenhouse gases based on their global warming potential.

Carbon Intensity

The Austin Energy system average carbon intensity is calculated as total greenhouse gas emissions at the point of combustion in pounds of CO₂-equivalents divided by net generation in kWh from all Austin Energy resources. Austin Energy generation resources include natural gas, coal and nuclear-powered units, renewable resources owned by Austin Energy and purchased power from renewable and non-renewable resources. GreenChoice® energy sales are subtracted from the net generation total since GreenChoice® customers can claim their carbon intensity to be 0 lbs. of CO₂-equivalents/kWh.

Table 1: Austin Energy System Average Carbon Intensity in Pounds of CO₂-eq/kWh

Carbon Intensity by Calendar Year	CY 2008	CY 2009	CY 2010	CY 2011	CY 2012
CO ₂ -eq/kWh	1.16	1.1	1.1	1.18	1.03

Plant Emissions

Total stack greenhouse gas emissions reported in Table 2 include carbon dioxide (CO₂) as well as the greenhouse gases methane and nitrous oxide. They are reported as metric tonnes of CO₂-equivalents. Non-CO₂ greenhouse gases make up less than 1 percent of Austin Energy's stack emissions.

Table 2: Austin Energy Total CO₂-equivalent Stack Emissions from Owned Generation in Metric Tonnes

Calendar Year	CO ₂ -eq Emissions in Metric Tonnes
CY 2012	4,635,867
CY 2011	5,836,305
CY 2010	5,113,139
CY 2009	5,503,901
CY 2008	5,888,310

Plant gas emissions reported in Table 3 do not include CO₂-equivalents and are reported in English dry tons. Austin Energy uses English dry tons as required for annual reporting to the Environmental Protection Agency (EPA).

Table 3: Plant Emissions Reported Annually to EPA

Plant Emissions (English tons/year)								
Year	Emission	Decker Creek Power Station	Sand Hill Energy Center	Sub Total:	AE's share of Fayette Power Plant:		Sub Total:	Total English Tons

Energy Conservation Audit and Disclosure Ordinance (ECAD)

The Austin City Council approved the Energy Conservation Audit and Disclosure (ECAD) ordinance in 2008 (and a revised version in April 2011) to improve the energy efficiency of homes and buildings that receive electricity from Austin Energy. The ordinance supports one of the goals of the Austin Climate Protection Plan, which is for the utility to offset 800 megawatts (MW) of peak energy demand by 2020.

Single-family homeowners must have energy audits performed on their properties prior to a sale, and must provide the results to prospective buyers at least three days before the end of the option period. Multi-family properties older than 10 years are required to perform an audit and report the results to the City of Austin and all residents living in those communities. Commercial building owners have new phased-in reporting that began June 1, 2012, for buildings 75,000 square feet and larger.

Table 4: Single-Family Audits

Dates	Home Sales	Exempt from Ordinance	Not Exempt from Ordinance	All Homes Audited	% Non Exempt Homes Audited
FY 2012	11,230	4,118	7,112	3,538	50%
FY 2011	10,370	4,514	5,856	2,895	49%
FY 2010	10,440	5,221	5,219	3,640	70%
June 1, 2009 to Sept. 30, 2009	4,383	1,729	2,654	2,027	76%

Notes The term "sale" corresponds to deed transfer. Sales data is from the City of Austin Data Mart, Travis Central Appraisal District and Williamson Central Appraisal District records. The term "Exempt" corresponds to a property that is less than 10 years old, performed at least \$500.00 in retrofits, or participated in the Austin Energy Home performance or Free Weatherization programs. Participant data comes from the REIP and PowerSaver databases. Only one audit is counted per property ID.

Table 5: Single-Family Audit Results

Audit Dates	% of Homes receiving a Recommendation After Audit	Audited Homes Needing Window Shading	Audited Homes Needing Attic Insulation	Audited Homes Needing Duct Sealing, Replacement, or Duct Insulation	Audited Homes Needing Weatherization
June 1, 2009 to Present	97%	54%	78%	74%	80%

Table 6: Single-Family Audit Results

Year Built	Average % Duct Leakage	Average Conditioned Square Footage	Average Sq-ft/Ton	Average HVAC EER	Average HVAC Age	Average Attic R-Value	% with Gas Heat	% with Gas Water Heaters	% with Water Saving Toilets	% with Lawn Irrigation Systems
Prior to 1985	21%	1,603	495	10.03	9.3	20	62%	64%	68%	31%
1985 or After	17%	2,219	513	9.97	10.3	26	62%	62%		

Table 7: Multi-Family Audits

Number of Audits Completed	
FY 2012	99
FY 2011	629
Total number of Apartment Communities Audited	728

The multi-family phase of the ECAD ordinance went into effect in 2011. The majority of properties requiring an audit complied at that time while another 99 properties complied in 2012. Of the 1,400 multi-family properties in Austin, 66 percent of the properties requiring audits have complied. Properties less than 10 years old or who have met an energy efficiency exemption as stated in the City code are exempt from having an audit.

Table 8: Multi-Family Audits

(Fiscal years represent cumulative totals.)

Fiscal Year	Apartment Communities within the Austin City Limits	Apartment Communities Exempt from Audit	Apartment Communities Not Exempt from Audit	Apartment Communities Audited	% Non Exempt Communities Audited
FY 2012	1,372	276	1,096	728	66%
FY 2011	1,347	270	1,077	629	58%

Table 9: Multi-Family Audit Results

Averages by Category	Electric Heat: Built prior to 1985	Electric Heat: Built 1985 to 2001	Electric Heat: Built 2001 to present	Gas Heat: Built prior to 1985	Gas Heat: Built 1985 to 2001	Gas Heat: Built 2001 to present
Audited Communities	372	74	3	221	51	7

Total Square Footage of All Required Buildings (million square feet)	102.0	42.6	25.8			
Total Square Footage of All Reported Buildings (million square feet)	81.6	8.4	0.7			
Total Square Footage of All Unreported Buildings (million square feet)	20.4	34.2	25.1			

Energy Efficiency Peak Demand Savings

Austin Energy's energy efficiency programs are designed to lower energy usage and reduce the amount of load on the electric system. Peak demand is the highest point of energy usage on any given day and typically occurs between the hours of 4 and 6 p.m. In FY 2012, 48.21 megawatts (MW) of peak demand were avoided through energy efficiency programs. Energy savings totaled 106-million kilowatt-hours (kWh), which is enough electricity to power almost 10,000 homes in Austin. Total energy savings since 1982 is about 1.7 billion kWh.

Table 13: Peak Demand

Peak Demand Reduction in MW	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
Residential	25.3	19.4	18.9	17.2	15.2
Commercial	19.7	19.6	14.9	19.5	21.1
Green Building	19.2	13.4	7.5	9.6	11.9
Total DSM Annually	64.2	52.4	41.2	46.3	48.2
% of 800 MW (cumulative)	16%	23%	28%	34%	40%

Table 14: Energy Efficiency Energy Savings

Program (kWh)	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012

*After 2009, Austin Energy no longer provided coupons for CFLs at retail locations. Customers can still, however, receive CFL incentives through vendor install programs such as Austin Energy's Home Performance with Energy Star.

Energy Efficiency Program Expenditures

Austin Energy provides rebates and partners with Velocity Credit Union to provide low interest loans as incentives for customers who make energy efficiency improvements. During FY 2012, Austin Energy provided customers approximately \$11.7 million in incentives to help pay for energy efficiency improvements.

Table 15: Energy Efficiency Program Expenditures

Electric Rebates and Incentives	FY 2008 Actual	FY 2009 Actual	FY 2010 Actual	FY 2011 Actual	FY 2012 Actual

Velocity Credit Union Loans

During FY 2008-2011, the Home Performance program bought down the loan interest rate for participating customers at a total cost to Austin Energy as reported in Table 17. In FY 2012, a Better Building Grant totaling \$5 million was deposited into Velocity to back loan projects; the total value of the 42 loans is reflected as an AE cost in the table.

Table 17: Velocity Credit Union

Fiscal Year	Participants	Loans
FY 2012	42	\$335,158.47
FY 2011	70	\$49,953
FY 2010	116	\$83,769.70

GreenChoice®

Austin Energy's GreenChoice® program is the nation's most successful utility-sponsored, voluntary green-pricing energy program. Customers who subscribe to GreenChoice® pay a renewable energy charge in place of the Fuel Charge. GreenChoice® participants have assisted Austin Energy with adding renewable energy resources, primarily wind power, to its generation portfolio. These customers have a green power rate that is locked in for five or 10 years to provide a hedge against the volatile cost of fossil fuels.

Austin Energy has led all 850 utility-sponsored programs in the country for the most renewable energy sales every year since 2002.

Beginning Oct. 1, 2011, the City of Austin switched to 100 percent clean, renewable energy — becoming the largest local government in America to power all of its facilities with 100 percent green energy (excluding generation plants and street lighting).

Table 19: GreenChoice® Batch Subscriptions

Purchase Power Agreements

Prior to 2011, Austin Energy had approximately 560 MW of wind power through purchase power agreements, with terms ranging from 10 to 25 years. The utility has set a goal that 35 percent of energy delivered to customers will come from renewable resources by 2020.

In September 2011, the Austin City Council approved two new wind contracts totaling 291 megawatts. This increased Austin Energy's total wind capacity under contract to more than 850 MW by 2013. Additionally, Austin Energy began purchasing all of the energy produced from the 30 MW Webberville Solar Project in December 2011 and 100 MW from a biomass plant in June 2012. This will bring Austin Energy's renewable energy portfolio closer to 25 percent by summer 2013.

Table 21: Purchase Power Agreements (current and upcoming)

Agreement	Type	Capacity (MW)	Term (years)	Duration	Expiration	Location
Lower Colorado River Authority	Wind	10.0	25	1995-2020	9/29/2020	West Texas
Sweetwater 2	Wind	91.5	12	2005-2017	2/11/2017	West Texas

MAP - Whitetail	Wind	92.3	25	2013-2037	1/1/2037	Coastal

Renewable Energy

The Austin Energy Resource & Climate Protection Plan approved by the Austin City Council in 2010 set a target of achieving 35 percent renewable resources by 2020. This includes 200 MW of solar capacity and 1,000 MW of wind power. During FY 2012, almost 15 percent of the power produced by Austin Energy came from renewable resources.

Table 22: Renewable Energy Resources

Measure	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
Total Renewable Energy Resources	6.6%	10%	10%	10%	15%
Installed Rooftop Solar Capacity Minus Losses (MW-AC) (Solar for Schools, municipal and rebate programs)	2.3 MW	3.5 MW	4.6 MW	6.2 MW	8.3 MW
Wind	273.2 MW	438.2 MW	438.2 MW	438.2 MW	633.9 MW

Solar Rebate Program

Austin Energy has a comprehensive Solar Rebate Program. In FY 2012, residential customers are provided \$2.50 per watt, with annual rebate amounts limited to \$15,000 and maximum rebates set at \$50,000 for any individual customer. As of November 2009, residents must complete the Austin Energy Home Performance with Energy Star energy efficiency program to qualify for a solar rebate.

The commercial rebate program pays a fixed performance-based incentive (PBI) to the customer over a 10-year period times the kWh of solar energy produced. Over the next five years, the PBI program is expected to pay, on average, 8 cents per kWh of solar energy produced and will provide enough funding for 50 systems up to 200 kW in size. The PBI for systems implemented during FY 2012 was 14 cents/kWh.

Since the Solar Rebate Program began in 2004, Austin Energy has issued \$20 million in rebates to residential customers and \$6 million in rebates to commercial customers totaling 5.6 MW-AC of solar capacity. Total solar capacity in Austin is 6.2 MW-AC.

Affordable

Austin Energy's mission is to deliver clean, AFFORDABLE, reliable energy and excellent customer service.

Bad Debt Expense

Bad debt expense is an estimate of the amount of revenue billed in any fiscal year that is deemed uncollectible. The FY 2012 bad debt expense represents a final, audited number based on an analysis of collectability. While Austin Energy has experienced growth in receivable balances for active accounts due to a collection delay resulting from the transition to the new customer billing system, the utility expects to collect those balances. Bad debt expense is recorded on inactive accounts with delinquent balances of 60 days or more.

Table 24: Revenue and Bad Debt Expense

Fiscal Year	Revenue	Bad Debt Expense	Percentage
FY 2012	\$1,183.4 million	\$3.5 million	0.30%
FY 2011	\$1,252.7 Billion	\$3.5 million	0.27%
FY 2010	\$1,151.8 Billion	\$4.2 million	0.37%
FY 2009	\$1,165.9 Billion	\$3.6 million	0.31%
FY 2008	\$1,219.8 Billion	\$2.1 million	0.17%

Bill Comparisons

Customers in San Antonio and Austin can only be served by their respective city-owned utilities. There are 72 municipally owned electric utilities in Texas and 75 electric cooperatives. Sixty-six of those electric cooperatives sell retail power, while the remaining nine are wholesale providers. None of the municipal utilities and only 1 of the 66 retail co-ops have opted into partial deregulation.

Corpus Christi, Houston and Dallas are in deregulated areas of Texas, meaning customers can choose among a number of potential energy providers. These different retail electric providers often offer different prices to customers. The charts below attempt to capture the range of offers in those locations.

Chart 4: Residential Customers – Bill Comparisons – February 2012 (Winter) using 1,000 kWh

Bond Ratings

Austin Energy has consistently maintained high bond ratings. A bond rating is a measure of a company's credit quality, which includes the ability to repay its debt in a timely fashion. Austin Energy underwent a rating review in the fall of 2012 and received a step-up rating from one rating agency, while the other two rating agencies reaffirmed their prior ratings. The Council-approved rate increase was a key component in their "stable" outlook for Austin Energy.

Customers

Austin Energy has four primary customer classes: **residential, commercial, industrial, and other.**

- **Residential** customers live in single-family dwellings, mobile homes, townhouses, or individually metered apartment units.
- The majority of **commercial** customers are small to large businesses are served at Austin Energy's secondary level of service. This means Austin Energy owns, operates, and maintains the equipment (wires, transformers, etc.) supplying power to those facilities.
- **Industrial (primary)** customers take service at high voltage (12,500 volts or higher) and own, operate and maintain their own equipment. Consequently, Austin Energy experiences lower overall system losses and expense in serving these customers. Large commercial and industrial customers such as semiconductors, high-tech facilities, and data centers typically fall under the primary level of service. These customers have very high usage and load factors because they tend to operate 24/7.
- The final class, **other**, typically refers to street lighting and facilities such as ballparks.

Table 29: Customers

Customers	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012	FY 2012 % by class

Fuel Collections

Over/Under fuel recovery represents the difference between actual fuel costs and the amount recovered through the fuel rate.

Table 35: Fuel Collections

Austin Energy	Fiscal Year Ended	Amount
(Over)/Under Fuel Recovery	2012	(\$10,384,851)
(Over)/Under Fuel Recovery	2011	\$19,139,368
(Over)/Under Fuel Recovery	2010	(\$39,230,735)
(Over)/Under Fuel Recovery	2009	(\$22,696,920)
(Over)/Under Fuel Recovery	2008	(\$1,730,474)

Fuel Costs

Costs allowed in the fuel tariff include commodity, purchase power, and ERCOT-related charges.

Table 36: Fuel Costs

Fuel Cost	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
Gas	\$250,721,680	\$214,711,985	\$203,976,741	\$190,320,211	\$148,047,838
Coal	\$87,063,860	\$84,635,000	\$91,590,706	\$88,068,421	\$85,032,243
Nuclear	\$15,823,059	\$16,866,183	\$16,655,851	\$18,295,747	\$14,087,793
Fuel Oil	\$420,142	\$566,981	\$2,405,166	\$2,698,718	\$897,703
Purchase Power	\$90,621,318	\$54,863,996	\$53,409,677	\$57,820,582	\$10,831,546
ERCOT*	\$10,165,180	\$21,889,298	\$21,617,196	\$66,372,518	\$69,831,165
Renewable	\$26,183,662	\$49,567,759	\$48,631,116	\$48,212,653	\$97,167,511
Total	\$480,998,901	\$443,101,202	\$438,286,453	\$471,788,849	\$425,895,800

*Through FY12, the ERCOT line item includes fees and charges from ERCOT such as net power costs and administrative and nodal fees. Beginning in FY13, those administrative and nodal fees associated with power supply adjustment customers will be recovered through the regulatory charge.

Chart 9: Percentage of Fuel Cost by Type

*A small amount of fuel oil is purchased (0.21 percent in FY 2012) as an ignition source for Decker 2 only.

Table 37: Percentage of Fuel Cost by Type

Fuel Cost (% by type)	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012

Total	100%	100%	100%	100%	100%

Fuel Charge

Austin Energy's Fuel Charge is reviewed annually. Generally, changes to the fuel rate are effective on Jan. 1 for the calendar year. (Effective FY 2013, the fuel charge — now called the power supply adjustment — will be set as part of the annual budget process.) Fuel Charge rates are established based on the type of electric service required by a customer and fall into one of three levels: secondary, primary, or transmission.

Primary Level Customers - This rate is applicable to electric service required by any customer who receives service at 12,500 volts (nominal) or higher and whose demand for power does not meet or exceed 3,000 kilowatts for any two months within the previous 12 months or as determined by the City of Austin.

Secondary Level Customers - This rate is applicable to electric service required by residential customers in single-family dwellings, mobile homes, townhouses, or individually metered apartment units. It is also applicable to any business that does not receive power at a primary or transmission level. Currently, some 30,000 businesses receive the secondary Fuel Charge rate.

Transmission Level Customers - This rate is applicable to electric service required by any customer who receives service at 69,000 volts (nominal) or higher. This rate shall be applied for a minimum of one year.

Primary and transmission voltage level customers (about 90 industrial customers) essentially receive power directly from a substation. This results in reduced line losses between the point of generation and delivery to the customer. These customers also install and maintain their own transformer(s) and related equipment at their site needed to step down the voltage before the power enters their facility. As a result, primary and transmission customers pay a slightly lower Fuel Charge.

Table 38: Austin Energy Fuel Charge

Calendar Year	Month	System	Secondary	Primary	Transmission
2012	January	3.598	3.615	3.508	3.471
2011	January	3.090	3.105	3.013	2.981
2010	January	3.635	3.653	3.544	3.507
2009	January	3.635	3.653	3.544	3.507
2008	January	3.635	3.653	3.544	3.507

Heat Rate

The heat rate is the number of British Thermal Units (BTU) needed to produce a kilowatt-hour (kWh) of electricity. In other words, the average heat rate is a measurement of how efficiently a generating unit converts fuel into electricity. The lower the heat rate, the higher the efficiency.

The system average heat rate will vary somewhat year-to-year due to a number of factors including outages and market conditions. The approximately 1 percent increase for FY 2012 was primarily due to lower demand and lower natural gas prices which resulted in lower dispatch of Fayette Power Plant. The reduced levels of production mean that units operated at lower, less efficient levels.

Table 39: Average Annual Heat Rate

Measure	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
System annual average heat rate (BTU/net kWh)	9,803	9,810	9,884	9,943	10,050

*Austin Energy's heat rate is calculated using generating units owned entirely or jointly by the utility. Austin Energy does not own any solar or wind generating units so they are not included in the system heat rate calculation.

Generation by Fuel Type

Austin Energy has set a goal that 35 percent of energy produced will come from renewable resources by 2020. During FY 2011, about 15 percent of the energy delivered from Austin Energy came from renewable resources, or 1.2 billion kilowatt hours. Purchase power agreements for wind, solar and biomass power will bring that number closer to 25 percent by 2013. As Austin Energy increases its renewables, corresponding decreases are achievable in the percentage of power produced from coal.

Chart 10: Fuel Cost Percentage by Generation

Table 40: Generation by Fuel Type

% Generation	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
Coal	33.20%	28.30%	32.50%	28.92%	26.97%

Decker GT 4 (simple cycle)	1988	Natural Gas	50	7,880	4.65%
Fayette 1 (steam cycle)	1979-80	Coal	285	1,707,678	66.81%
Fayette 2 (steam cycle)	1979-80	Coal	285	1,819,145	87.55%
South Texas Project 1 (steam cycle)	1988-89	Nuclear	200	1,870,103	96.70%
South Texas Project 2 (steam cycle)	1988-89	Nuclear	200	997,717	99.93%
Total	-	-	2,466	9,024,900	-

Note: This generation data reports only Austin Energy's 50 percent share of units 1 and 2 at the Fayette Power Project (coal) and 16 percent share of the South Texas Project (nuclear).

Table 42: Austin Energy Share of FPP and STP

Unit	Capacity Rating (MW)	Austin Energy's Share (MW)
Fayette 1	570	285
Fayette 2	570	285
South Texas Project 1	1,250	200
South Texas Project 2	1,250	200

System Peak Demand

System peak demand is the largest amount of electricity consumed by Austin Energy customers at any given time. Every year for the past five years, the system peak has occurred between the hours of 4 and 5 p.m. The utility works year round to assure the electric distribution grid is ready and capable of handling the peak energy use that occurs during summer months.

Table 43: System Peak Demand

Fiscal Year	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
MW	2,514	2,602	2,628	2,714	2,702
Date Set	4-Aug	29-Jun	23-Aug	29-Aug	26-Jun

System Fuel Cost Average

System fuel average cost is the cost of fuel purchased divided by the number of kilowatts generated. The steady decline in average fuel cost is largely attributable to the decrease in natural gas prices over recent years.

Table 44: System Fuel Cost Average

Measure	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
System annual average fuel cost (fuel/kWh)	3.655 cents per kWh	3.371 cents per kWh	3.446 cents per kWh	3.523 cents per kWh	3.225 cents per kWh

System Production Cost

Austin Energy's system annual average production cost is total operations and maintenance costs divided by total generation in kilowatt-hours.

Table 45: System Production Cost

Measure	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
System annual average production cost (includes fuel plus operating & maintenance)	4.403 cents per kWh	4.165 cents per kWh	4.331 cents per kWh	4.304 cents per kWh	4.197 cents per kWh

Reliable

*Austin Energy's mission is to deliver clean, affordable, **RELIABLE** energy and excellent customer service.*

Equivalent Availability Factor

A common measure of reliability for generating units is the Equivalent Availability Factor (EAF). The EAF is a measure of the number of hours the full capacity of a generating unit is available annually.

Availability targets for base load facilities (South Texas Project and Fayette Power Project) are adjusted annually depending on the duration of any planned outages for that year. For intermediate and peaking facilities, Austin Energy's peak season availability target is greater than or equal to 95 percent.

Table 46: Performance Results Measuring Equivalent Availability Factor (EAF)

Measure	Target	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
South Texas Project	94.80%	96.10%	91.65%	90.50%	87.15%	79.26%
Fayette Power Project	94.20%	91.10%	96.03%	83.78%	83.69%	83.48%
Sand Hill Energy Center Unit 5A	95.00%	99.43%	99.20%	99.17%	78.11%	74.20%
Sand Hill Energy Center Units 1-4/6-7	95.00%	97.53%	98.31%	98.17%	98.62%	92.66%
Decker Creek Power Station GT 1-4	95.00%	85.11%	88.34%	90.49%	93.07%	86.27%
Decker Creek Power Station D1-2	95.00%	90.13%	91.79%	82.63%	90.77%	74.98%

Plant Outages

The table below shows outages lasting more than 12 hours for Austin Energy-owned generating units in FY 2012 due to equipment malfunctions or other problems.

Table 47: Plant Outages

Unit	Outage Start Date/Time	Outage End Date/Time	Duration (hours)	Description
Sand Hill Energy Center Unit 5	3/22/12 0:00	5/27/12 7:00	1,567	Gas turbine compressor S1 Vane
	9/6/12 15:31	9/9/12 14:30	71	HRSB tube leak
Sand Hill Energy Center Unit 3	5/22/12 20:32	5/23/12 9:40	13	GSU #2 tripped due to fault on Unit 4
Sand Hill Energy Center Unit 4	1/12/12 15:19	3/5/12 15:26	1,236	High Pressure Turbine Repairs
	5/22/12 20:32	5/23/12 9:40	13	Failed generator breaker
	8/5/12 17:35	8/9/12 10:34	113	CPU failure
Sand Hill Unit 6	4/17/12 18:19	4/18/12 8:39	14	Loss of 480-volt station service

Unit	Outage Start Date/Time	Outage End Date/Time	Duration (hours)	Description
Sand Hill Energy Center Unit 7	4/17/12 18:19	4/18/12 8:39	14	Loss of 480-volt station service
	6/23/12 14:30	6/26/12 14:30	70	Gas turbine lube oil pump failure
Fayette Power Project Unit 1	1/20/12 1:28	1/24/12 19:05	89.62	1A BWCP tripped on high temperature cooler leak. Changed to Start-up Failure.
	1/23/12 19:05	1/24/12 8:47	13.7	Changed to Start-up Failure due to 1A APH drive coupling failure.
	3/30/12 23:55	4/15/12 15:12	375.28	Generator #8 bearing and hydrogen seal meggered low, water in oil.
	7/10/12 20:49	7/12/12 13:07	40.3	Root switch that controls communication with CP's & workstation congested.
	8/3/12 20:00	8/5/12 17:02	45.03	Lower slope water wall tube leak.

	3/15/12 19:21	3/30/12 5:57	370.36	Main Boiler Feed Pump Turbine - No speed control
Decker GT 3	10/1/11 0:00	4/4/12 0:00	4454.19	Rotor winding short

ERCOT Forced Load Reduction

While ERCOT does issue power watches when reserves are low, load reduction for Austin Energy customers is voluntary during these watches. ERCOT has only issued two mandatory orders for load reduction statewide — in February 2011 and April 2006.

Table 48: ERCOT Forced Load Reduction

ERCOT Event	AE Load Reduction	Rolling Blackouts Ordered	Firm Load Restored
2-Feb-11	160 MW	5:43 a.m.	1:07 p.m.
17-Apr-06	40 MW	4:13 p.m.	6:10 p.m.

Austin Energy accounts for approximately 4 percent of the peak statewide summer load, meaning Austin Energy is required to shed 4 percent of ERCOT's total load reduction during a mandatory load shedding event. On Feb. 2, 2011, ERCOT rapidly increased its load-shedding requirement to 4,000 MW, resulting in 160 MW of required load shedding for Austin Energy. Following the February 2011 weather event, Austin Energy performed a thorough review of circuits eligible for rolling blackouts and increased the number of eligible circuits from 44 to 115. This will reduce the impact on customers should such an emergency occur again.

Reliability (SAIFI/SAIDI/SATLPI)

Austin Energy invests about \$80 million a year on average on capital improvements for the electric system. Austin Energy has established long-term goals that the average number of power outages per customer not exceed 0.80 per year (SAIFI); that the average duration of power outages not exceed 60 minutes (SAIDI); and that the 12-month rolling average of the number of transmission line faults per 100 miles not exceed 3.00 (SATLPI).

In a recent benchmark study released of 21 utilities in the U.S. and Canada, Austin Energy ranked in the 1st quartile with the lowest frequency of outages per customer and the shortest outage duration per average customer. Other utilities in the study by First Quartile Consulting included CenterPoint Energy (Houston), CPS Energy (San Antonio), Oncor (Dallas), Portland General Electric, KCP&L of Kansas City, and Baltimore Gas & Electric.

In FY 2012, Austin Energy experienced 2.9 transmission faults per 100 miles against a goal of 3 or fewer per 100 miles. Austin Energy had 18 transmission disturbances during the fiscal year compared to 33 in 2001.

Table 49: SAIFI/SAIDI/SATLPI

Measure	Target	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
System Average Interruption Frequency Index (SAIFI)	≤0.8	0.63	0.89	0.69	0.77	0.77
System Average Interruption Duration Index (SAIDI)	≤60	46.48	63.41	51.57	54.54	60.74
System Average Transmission Line Performance Index (SATLPI)	≤3	1.46	2.1	1.94	1.78	2.9

Line Clearance Program (Tree Trimming)

Austin Energy invests about \$9 million annually in its tree-trimming program. A staff of 13 Austin Energy arborists and foresters oversee the program. Contractors prune trees system wide on a six-year cycle, maintaining approximately 400 miles of power lines each year. About 50 crews (160 to 170 staff members) are in the field each day. Vegetation Management is important for public safety and the reliability of the electric system.

Austin Energy is one of the few utilities in the nation that attempts to meet with each property owner in advance of tree trimming. A plan detailing the trimming needed for each tree on a property is discussed and provided to the property owner for their acknowledgment and signature. When property owners refuse to meet or cooperate with scheduling, they receive a letter that indicates when trimming will occur. The number of refusal letters is extremely small, less than 1 percent annually.

Table 50: Tree Trimming Workload

Fiscal Year	Miles Trimmed	Properties	Refusals
FY 2012	375	12,170	11
FY 2011	447	11,856	19
FY 2010	324	13,223	38
FY 2009	480	13,892	26
FY 2008	409	12,145	47

Table 51: Customer Surveys

FY2012	% of customers satisfied with line clearance on their property	% of customers who acknowledge importance of line clearance
Quarter 1	73%	99%
Quarter 2	77%	96%
Quarter 3	78%	100%
Quarter 4	71%	99%

*Note: All customers surveyed had trees trimmed in FY 2012.

Service

*Austin Energy's mission is to deliver clean, affordable, reliable energy and **EXCELLENT CUSTOMER SERVICE**.*

City of Austin Contact Center

Austin Energy manages the City of Austin Utility Contact Center and Online Customer Care portal. This is the place customers call or go online to start, stop, or transfer utility services. The Contact Center receives about 6,000 calls per day.

Table 52: Contacts Received

Fiscal Year	Contacts Received
FY 2012	1,641,039
FY 2011	1,377,317
FY 2010	1,525,739
FY 2009	1,435,929
FY 2008	1,405,573

Table 53: Call Distribution

Type	Percentage
General Residential	92%
General Commercial	5%
Outages	4%

Note: Total may not sum due to rounding.

Table 54: Average Speed for Answering Calls

Fiscal Year	Seconds
FY 2012	101
FY 2011*	116
FY 2010	90
FY 2009	92
FY 2008	74

*The average time for answering calls was up in FY 2011 due to marketing of the "Best Offer Ever" campaign, calls on the White Rodgers thermostat recalls, and additional training for CC&B.

Austin 3-1-1 Call Center

Austin Energy manages the city's 3-1-1 call center that provides information about any Austin department or service. The center operates 24 hours a day, 7 days a week, 365 days a year.

Table 55: Austin 3-1-1 Calls and Service Requests

Fiscal Year	Calls Answered	Service Requests
FY 2012	1,047,020	172,155
FY 2011	1,138,325	193,280

State	3%
Transportation Department	3%

Payment Arrangements

Utility payment arrangements are available to customers who fall behind on their City of Austin utility bills. To enter into an arrangement, customers must pay one-third of their delinquent total and pay monthly installments as well as their monthly bill. Special six-month payment arrangements are generally available during the summer.

Table 57: Customer Payment Plans

Fiscal Year	Avg. No of Payment Plans Per Month	Total \$ Per Fiscal Year
FY 2012	7,032	\$46.2 million
FY 2011	13,175	\$70.4 million
FY 2010	12,389	\$75.7 million
FY 2009	11,984	\$70.8 million
FY 2008	11,366	\$76.8 million

Budget Billing

Austin Energy's Levelized Billing Program, now known as Budget Billing, is available to any customer who prefers to avoid significant fluctuations in their monthly utility bills. With this program, Austin Energy takes an average of a customer's previous 12 month's worth of utility bills to calculate an average utility bill payment. With Budget Billing, accounts are reviewed and adjusted every six months. The below averages reflect all City of Austin utilities including electric, water, wastewater, solid waste, transportation and drainage fees.

Table 58: Customers Using Budget Billing

Fiscal Year 2012	Month and Year	Billed Levelized Accounts Per Month	Average Levelized Bill Amount
	Oct-11	8,321	\$236.50
	Nov-11	9,927	\$233.75
	Dec-11	10,810	\$231.34
	Jan-12	11,403	\$228.02

Low-Income Discount Program

The City of Austin has one of the most generous Customer Assistance Programs in the nation. Utility bill discounts are a key component of the program. They are provided to customers already receiving benefits through a variety of federal, state, county, or city assistance programs. Nearly 10,000 customers are currently receiving combined City of Austin utility bill discounts at an average of about \$400 per year per family, \$280 of which comes from Austin Energy. In FY 2012, Austin Energy waived the Electric Service Customer Charge of \$6 per month and provides a discounted Fuel Charge of 1.7 cents per kWh. Total utility bill savings for all recipients totaled almost \$4 million annually.

Table 59: City of Austin Low-Income Discount Program Annual Customer Savings

Utility Discount Program (electric only)	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012

Plus 1 Fund

The City of Austin's Plus 1 Fund provides emergency utility bill financial assistance to customers experiencing extreme hardships such as medical illness or sudden job loss. In 2009, the City of Austin doubled to \$300,000 the amount of funding made available annually for this program. Beginning in FY 2009, City of Austin employees were given the option to donate to the Plus 1 Fund through the City's annual Combined Charities Campaign, which raises money for local and regional charitable groups. Additionally, utility customers have the option to donate to the Plus 1 Fund through their utility bill payments. Plus 1 funding is distributed to customers by more than a dozen social service agencies.

Table 62: Plus 1 Funding

Funding Source	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
Austin Energy	\$150,000	\$300,000	\$300,000	\$300,000	\$300,000
COA Combined Charities Campaign (COA employees)	\$0	\$4,718.13	\$3,820.47	\$2,574.45	\$2,173

Average (monthly)		\$31,374.57	187
Totals		\$376,494.81	2,241

Free Weatherization Program

Austin Energy offers free weatherization services to qualifying low-income, elderly and physically/mentally disabled customers. The program provides up to \$1,500 in home improvements including installation of attic insulation, sealing and repair of ducts, solar screen installations, weather stripping around entry doors, and minor home repairs to improve the effectiveness of efficiency improvements.

In FY 2010, Austin Energy received total grants of \$9.2 million from American Recovery and Reinvestment Act (ARRA) funds that allowed for the weatherization of 1,864 homes or apartments for low-income, elderly, and disabled customers within Austin Energy's service area. Under this program, each dwelling received, on average, about \$5,000 worth of improvements including new energy efficient appliances and air conditioning and heating equipment.

Table 64: Customer Assistance Program Customers Receiving Free Weatherization

Fiscal Year	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
Homes Receiving Weatherization	505	538	456*	1044*	715*

*In FY 2010, 127 of the 456 homes received weatherization through the use of ARRA funds.

*In FY 2011, all homes received weatherization through the use of ARRA funds.

*In FY 2012, the 715 homes used both ARRA funds and AE funds.

Medically-Vulnerable Program

The City of Austin maintains a Medically-Vulnerable Registry of customers with a long-term disease, ailment or critical illness. Customers eligible for the registry receive additional time to pay their utility bills and personal case management services from Austin Energy and partnering social service agencies.

Table 65: Medically-Vulnerable Program Participants

Fiscal Year 2012	Month	Households Served
	Oct-11	189
	Nov-11	194
	Dec-11	172

	Sep-12	203
Average (monthly)		193
Total*		2,312

*Customers may overlap from one month to the next.

Customer Satisfaction Ratings

Austin Energy is proactive in addressing customer needs and regularly monitors customer satisfaction through customer surveys. In recent years, overall customer satisfaction has gone down. The drivers of the decrease are customer perceptions of price and value due to higher electric bills resulting from hotter than normal temperatures in 2011 and a weakened economy, despite Austin Energy providing among the lowest electric rates in Texas. Ratings for Austin Energy reliability and quality are consistently high.

Table 66: Overall Satisfaction Ratings

Measure	Target	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
Overall Customer Satisfaction	83/100	82/100	75/100	71/100	70/100	61/100

Table 67: Satisfaction Ratings by Customer Type

Customer Satisfaction	FY 2008	FY 2009	FY 2010	FY 2011	FY 2012
Residential	76%	73%	74%	69%	68%
Commercial	84%	76%	78%	68%	62%
Key Accounts*	86%	75%	60%	76%	55%

*Residential and Commercial surveys are conducted quarterly. Key Accounts surveys are conducted annually.

Payment Processing

All City of Austin utility payments are posted the same day received — far exceeding the industry average of up to three days. This requires the daily posting of about 24,000 checks and payment stubs. In addition, the number of payments received electronically is exceptionally high and continues to increase. Part of that success is due to a Western Union wire program set up by Austin Energy to transfer customer payments to the utility when made through some 50 retail locations.

Table 68: Breakdown of Payment Methods

Fiscal Year	Authorized Pay Stations via Western Union (ex. ACE cash Express, HEB, Money Box, Randall's)	Online Banking (via customers bank)	Bill Matrix (via phone or Austin Energy Website) (credit, debit, E-check)	Austin Energy Website (registered with Online Customer Care) (e-check)	Electronic Fund Transfer (draft by AE)	Misc. (ex. Collections, IRS)	Walk-in Payment Centers	Mail
FY 2012	11.16%	18.51%	3.95%	11.92%	8.33%	0.28%	1.89%	43.96%
